LETTER

Mail Stop Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

December 14, 2005

Sir:

Attached are copies of the certified priority documents with regard to the above-identified application which were inadvertently omitted from our amendment filed November 30, 2005.

If there are any questions regarding this letter or the application in general, a telephone call to the undersigned would be appreciated since this should expedite the prosecution of the application for all concerned.

If necessary to effect a timely response, this paper should be considered as a petition for an Extension of Time sufficient to effect a timely response, and please charge any deficiency in fees or credit any overpayments to Deposit Account No. 05-1323 (Docket # 3036/49686).

Respectfully submitted,

Gary R. Edwards

PRIORITY DOCUMENT
SUBMITTED OR TRANSMITTED IN
COMPLIANCE WITH
RULE 17.1(a) OR (b)

GB99/4354

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Warning

After an application for a patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the Patents Act 1977 stops you from applying for a patent abroad without first getting written permission from the Patent Office unless an application has been filed at least 6 weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been revoked.

Notes

- If you need help to fill in this form or you have any questions, please contact the Patent Office on 0645 500505.
- Write your answers in capital letters using black ink or you may type them.
- If there is not enough space for all the relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form.
- If you have answered 'Yes' Patents Form 7/77 will need to be filed.
- Once you have filled in the form you must remember to sign and date it.
- For details of the fee and ways to pay please contact the Patent Office.

ACOUSTICALLY ACTIVATED MARKETING DEVICE

The present invention relates to an acoustically activated marketing device.

The consumer obtains the device from a retailer. He/she wears the device as a badge while at the cinema or while listening to the radio or TV. When a specific advert is broadcast the badge interprets part of the sound track and activates the display on the badge.

According to the present invention there is provided apparatus for displaying information, said apparatus including receiving means arranged to receive a signal, activation means arranged to compare said received signal with a predefined signal and upon said received signal matching said predefined signal cause a display means to display predefined information.

Said received signal may be an acoustic signal.

Said receiving means may be a microphone.

According to an aspect of the present invention said received signal is in digital format.

According to a further aspect of the present invention said received signal is transmitted over the internet.

According to a further aspect of the present invention said received signal is broadcast by a commercial broadcasting means.

Said commercial broadcasting means may be a television broadcasting means. Alternatively, said commercial broadcasting means may be a radio broadcasting means. Alternatively, said commercial broadcasting means may be a cinema broadcasting means.

According to yet a further aspect of the present invention said apparatus further includes programming means coupled to said activation means and arranged for programming said predefined signal and said predefined information.

According to an aspect of the present invention said display means may be a liquid crystal display.

According to an aspect of the present invention said activation means may be an application specific integrated circuit.

According to yet another aspect of the present invention said apparatus further includes an analogue to digital interface means, a programmable digital processor and battery means.

Said battery means may be a button cell type battery.

According to an aspect of the present invention said predefined information may be an advertisement. Alternatively, said predefined information may be a message.

According to a further aspect of the present invention there is provided a method for displaying information, said method including the steps of receiving a signal, comparing said received signal with a predefined signal, and upon said received signal matching said predefined signal, displaying predefined information.

According to a further aspect of the present invention said method includes the further step of programming said predefined signal and said predefined information.

According to yet a further method aspect of the present invention said received signal is an acoustic signal.

According to yet a further method aspect said received signal is a commercially broadcast signal.

While the principle advantages and features of the invention have been described above, a greater understanding and appreciation of the invention may be obtained by referring to the drawings and detailed description of the preferred embodiment, presented by way of example only, in which;

Figure 1 shows the display means of an acoustically activated marketing device according to one aspect of the present invention,

Figure 2 shows the electronic layout of an acoustically activated marketing device according to one aspect of the present invention.

In Figure 1 an acoustically activated marketing device (10) is shown comprising a low-cost display (12). The display (12) may be a liquid crystal display (LCD). As will be appreciated by those skilled in the art, alternative display means may be used, such as a light emitting diode (LED) or a thermo-cromic display. The device (10) operates such that upon detection of a predefined signal the display (12) displays predefined information. This information may be an advertisement such as a cocktail glass (14). As will be appreciated by those skilled in the art, other types of predefined information can be displayed such as a message. As will be appreciated, the message may be an indication that a prize has been won.

In Figure 2 the electronics layout (20) of an acoustically activated marketing device (10) is shown. In this aspect of the present invention the electronics layout includes a microphone element (22) connected to an A/D interface (24). The microphone elements operate to detect a predefined acoustic signal. The device (10) further includes a programmable digital processor (26) which allows for a variety of acoustic signals and corresponding display information to be programmed into the device. Thus a single device can be mass-produced and then programmed in the factory to satisfy a variety of different customer's needs.

The device (10) further comprises a battery source (28). In this embodiment of the present invention the battery source is a button type battery.

As will be appreciated, when the predefined information is displayed the consumer may be in an area of high noise, for example; in the midst of

conversation in a cinema or at home, or when driving in a car. This noise may mask the predefined signal and prevent the display means from being activated. Ideally, this should not be greater than 1 non-activation out of 10 or 20 occasions.

As will be appreciated, while the consumer is wearing the badge, it will be subject to many different sources of noise, for example; conversation, music and car noise. These could, by chance, contain a sequence of sounds that are sufficiently like the predefined signal to trigger the device. The probability of this type of 'false alarm' occurring can be reduced by increasing the complexity of the predefined signal, but this may be at the expense of battery life or badge cost. Ideally, less than 1 in 100 badges should be unintentionally activated during their lifetimes.

The required operating lifetime of the badge is expected to be application-dependent. Long operating lifetimes will require higher cost batteries or lower power circuits.

To minimise the production cost, an application specific integrated circuit (ASIC) can be developed. To reduce packaging costs the ASIC can be directly mounted on the printed circuit board and then protected from the atmosphere by a layer of plastic. For this type of ASIC to be viable, large production runs will be necessary. The requirement for such runs will make it more difficult to adapt the ASIC to a different application. Some degree of programmability may be possible, however this may require the use of a more expensive production process.

As will be appreciated by those skilled in the art, various modifications may be made to the embodiment hereinbefore described without departing from the scope of the present invention.

CLAIMS

1. Apparatus for displaying information, said apparatus including receiving means arranged to receive a signal, activation means arranged to compare said received signal with a predefined signal and upon said received signal matching said predefined signal cause a display means to display predefined information.
2. Apparatus as claimed in Claim 1, wherein said received signal is an acoustic signal.
3. Apparatus as claimed in Claim 2, wherein said receiving means is a microphone.
4. Apparatus as claimed in any preceding Claim, wherein said received signal is in digital format.
5. Apparatus as claimed in Claim 4, wherein said received signal is transmitted over the internet.
6. Apparatus as claimed in any preceding Claim, wherein said received signal is broadcast by a commercial broadcasting means.
7. Apparatus as claimed in Claim 6, wherein said commercial broadcasting means is television broadcasting means.

8. Apparatus as claimed in Claim 6, wherein said commercial broadcasting means is radio broadcasting means.
9. Apparatus as claimed in Claim 6, wherein said commercial broadcasting means is cinema broadcasting means.
10. Apparatus as claimed in any preceding Claim, wherein said apparatus further includes programming means coupled to said activation means and arranged for programming said predefined signal and said predefined information.
11. Apparatus as claimed in any preceding Claim, wherein said display means is a liquid crystal display.
12. Apparatus as claimed in any preceding Claim, wherein said activation means is an application specific integrated circuit.
13. Apparatus as claimed in any preceding Claim, wherein said apparatus further includes an analogue to digital interface means, a programmable digital processor and battery means.
14. Apparatus as claimed in Claim 13, wherein battery means is a button cell type battery.
15. Apparatus as claimed in any preceding Claim, wherein said predefined information is an advertisement.

16. Apparatus as claimed in any of Claims 1-15, wherein said predefined information is a message.

17. Method for displaying information, said method including the steps of:

receiving a signal,
comparing said received signal with a predefined signal, and upon
said received signal matching said predefined signal,
displaying predefined information.

18. Method as claimed in Claim 17, wherein said method includes the further step of:

programming said predefined signal and said predefined information.

19. Method as claimed in Claims 17 or 18, wherein said received signal is an acoustic signal.

20. Method as claimed in any of Claims 17 - 19, wherein said received signal is a commercially broadcast signal.

21. Apparatus as hereinbefore described with reference to the accompanying drawings.

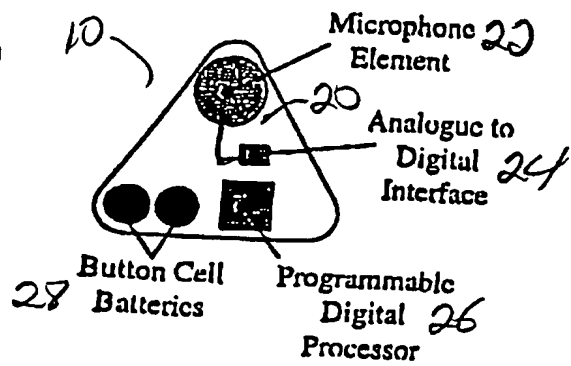

ABSTRACT

An acoustically activated marketing for displaying predefined information in response to a predefined signal being detected. The device is obtained from a retailer and worn as a badge while at the cinema or while listening to the radio or TV. When a specific advert is broadcast the badge interprets part of the sound track and activates the display on the badge. The displayed information may be an advertisement or a message. The predefined signal may be broadcast by a commercial broadcasting means, such as a television or radio.
